

Mobile Generators

COMMERCIAL VEHICLES

Today, mobile generator requirements are more in demand than ever before. Users need a reliable, easy-to-use power source that can handle a variety of jobs, and when you need one for the road, you look for the best. KOHLER's mobile generators range from 4 to 20 kW and come in a variety of fuel options -- diesel, liquid propane and gasoline. That means there's a KOHLER unit for nearly every mobile power need, such as aerial lift trucks, mobile x-ray units, utility vehicles, splicing trailers, fire trucks, on-the-spot reporting units and more. Also, units can easily be customized for your specific power needs, offering you the utmost flexibility.

These generators are built to be quiet and compact, taking up little space on mobile applications where every inch is needed. They were also built to be quiet because we know noise can be a sensitive issue on mobile applications. KOHLER's exclusive PowerBoost voltage regulation system ensures a generator that starts up smoothly and faster than the competition while protecting sensitive electronic equipment from voltage fluctuations.
